

Discover the riches of our editor ✨

Read on to better understand the functionalities you can test with this demo.

💡 Did you know that...

- CKEditor is **customizable**. You can fine-tune the set of enabled plugins, available toolbar buttons, and the behavior of features.
- The editor supports **@mentions**. Start typing `@An` to see available suggestions.
- You can **paste content** from Word or Google Docs, retaining the original document structure and formatting.
- Thanks to Import from Word , you can **convert** a DOCX document into HTML and edit it in CKEditor 5.
- You can **export your document** to PDF  or Word  with a single click.

Inserting Images and Image Editing

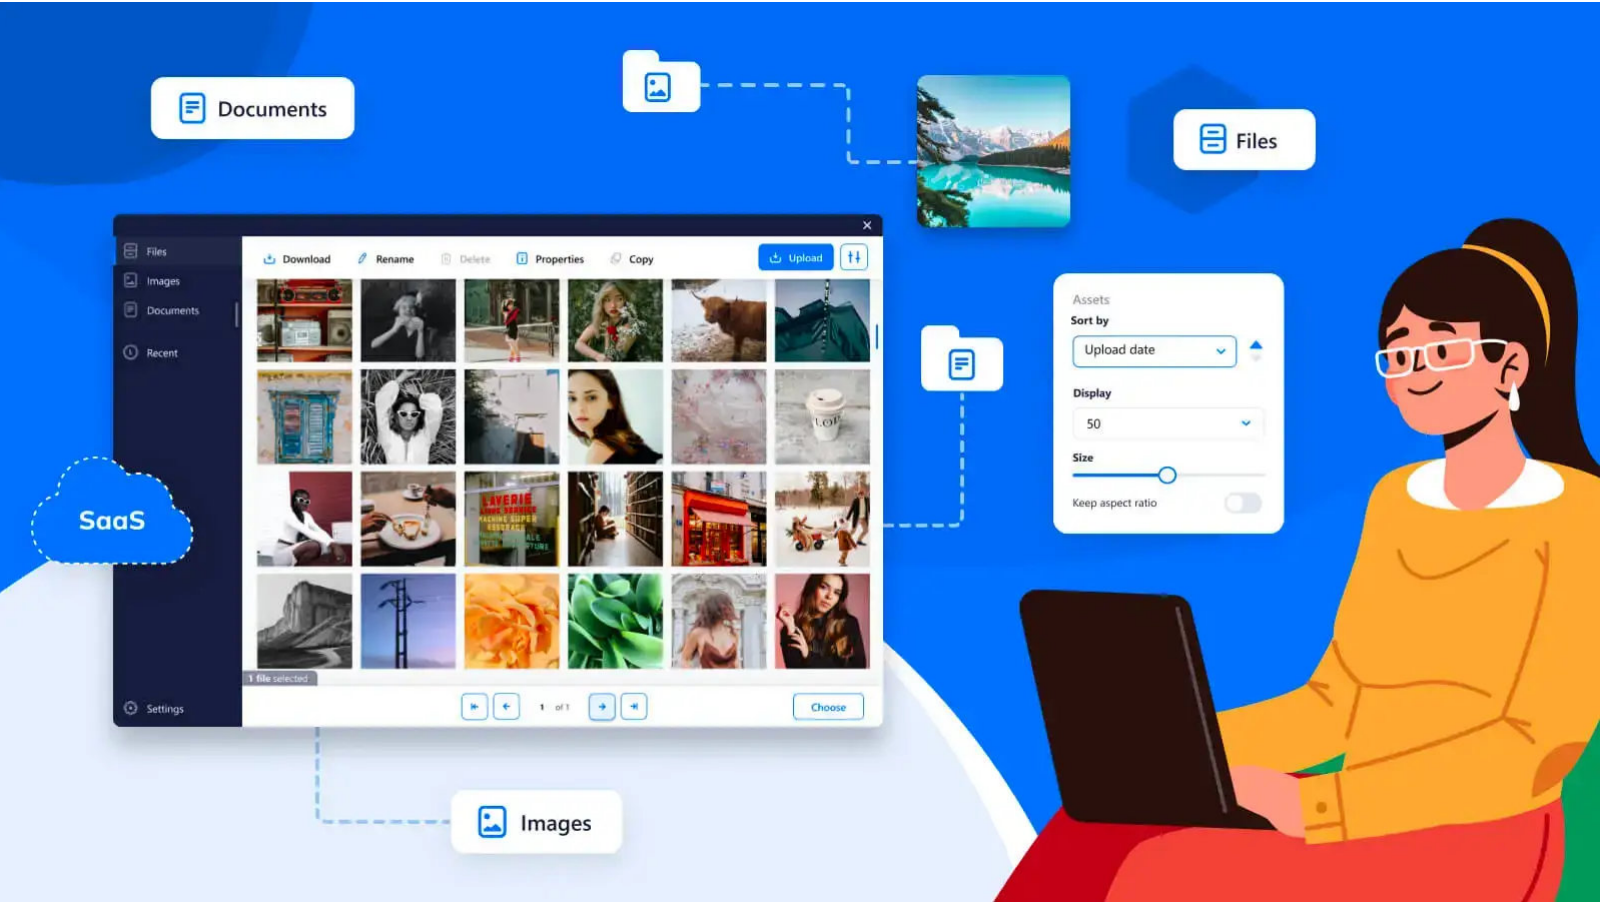

Inserting and editing images is seamless and efficient, thanks to the powerful capabilities and the intuitive interface of the [CKBox integration](#). Click the CKBox icon  to manage or edit images and other files in this demo.

Effortless Image Insertion:

- Drag and Drop: Simply drag images from your device or directly from web sources into the editor.
- URL Uploading: Paste image URLs for quick embedding without leaving the editor.

Advanced Image Editing:

- Editing: Resize, crop, and rotate directly from the editor, ensuring perfect placement every time.
- Customizable Styles: Apply various presets to format your image according to social media standards.

Autoformatting in CKEditor 5

Some features of CKEditor 5 might be hard to spot at first glance. Thanks to **autoformatting**, you can use handy shortcuts in the editor to format the text on the fly:

Block formatting	Bulleted list	Start a line with <code>*</code> or <code>-</code> followed by a space.
	Numbered list	Start a line with <code>1.</code> or <code>1)</code> followed by a space.
	To-do list	Start a line with <code>[]</code> or <code>[x]</code> followed by a space to insert an unchecked or checked list item.

	Headings	Start a line with #, ##, or ### followed by a space to create a heading 1, heading 2, or heading 3.
	Block quote	Start a line with > followed by a space.
	Code block	Start a line with <code>`. `</code> .
	Horizontal line	Start a line with ---.
Inline formatting	Bold	Type ** or <code> </code> around your text.
	<i>Italic</i>	Type * or <code> </code> around your text.
	<code>Code</code>	Type <code>`</code> around your text.
	Strikethrough	Type <code>~</code> around your text.
